External pressure module (IDOS) for required pressure ranges

The PC6-PRO Pressure Calibrator combines the latest developments in pressure instrumentation with advanced sensor and component technology to offer a versatile calibration instrument. It is designed for accurately testing and calibrating Pressure Transducers, Pressure Transmitters, Pressure Switches, Pressure Relief Valves, Analogue Instrumentation (Pressure Gauges). The compact size of the PC6-PRO does not compromise functionality. It can simultaneously show pressure versus voltage, current, date & time, percentage of pressure and pressure switch status, temperature, maximum and minimum pressure values. PC6-PRO can source current and voltage using various options e. g. continuous, step or square root functions. The modular design of the PC6-PRO allows for a customised calibrator to be created, giving minimal function if a non-complex instruments is required (i.e. A simple pressure indicator). Alternatively, fully featured calibration system can be supplied accomodating various pressure ranges using external pressure modules (IDOS').
